Project Name	<b>DocSpot:</b> Seamless Appointment Booking for Health
Maximum Marks	4 Marks

### Solution Architecture

#### DocSpot – Solution Architecture Overview

DocSpot provides a seamless system for booking healthcare appointments, connecting patients and healthcare providers through a structured, scalable platform.

---

#### Architecture Components:

##### 1. Users

- Patient: Books and manages appointments.
- Healthcare Provider: Views schedules, manages availability, and communicates with patients.

---

##### 2. Presentation Layer

- Frontend: The user interface for patients and doctors to interact with the system.
- Backend API: Connects the frontend to the backend services and handles data processing.

---

##### 3. Authentication & Communication

- Handles user authentication, authorization, and real-time messaging (e.g., chat or notifications).

---

##### 4. Internal Database

- Stores initial user session data, login info, and temporary booking states.

---

##### 5. Automation Module

- Processes appointment logic, scheduling rules, reminders, and background tasks.
- Connects the presentation layer to the main data storage.

---

## 6. Data Storage

- Central database where all appointment records, patient info, provider details, and transaction logs are stored securely.

---

## 7. DevOps Integration

- CI/CD (Continuous Integration / Continuous Deployment): Ensures faster and safer updates to the system.
- Cloud Deployment: Enables scalable, online access to the platform.

---

### ☐ Benefits

- Quick and easy appointment scheduling.
- Real-time updates and communication.
- Secure data handling and user authentication.
- Scalable for growing users and providers.
